

This report is a summary item analysis report. It provides the number and percent of students in various groups who chose each distracter (answer choice) associated with multiple choice questions on the ELA Test and who earned each possible score value (according to the scoring rubric used) on the cluster response portion of the test.

The report has three sub reports for each school with a summary for the district as a whole. One sub report is for students who are identified as regular education students (the label "Regular Ed Students" appears in the header of each page of the report). Another sub report is for those students identified as special education (the label "Special Ed Students" appears in the header of each page of the report). The third and final sub report is for all students - Regular Education and Special Education - combined.

The sub-report contains a section for the multiple choice portion of the test and another section for the cluster response portion of the test. Each section is appropriately labeled on the top line of the header (center) on each page of the report. The data in the body of the report is somewhat different for each section. Here's a brief summary of the information for each section:

For the multiple choice section:

Question Num: Is the label associated with the question on the test (some question numbers may be skipped if they are not part of the multiple choice portion of the test).

Question Ans: Is the distracter (choice number) associated with the correct answer for that question. The number 3, for example, refers to the 3rd answer choice regardless of how it is labeled on the test itself.

Item Diff: Identifies item difficulty as the percent of students who chose the correct answer for the question.

Choice 1 Num: Is the number of students in the reported group (school or district; all students) who selected choice number 1 as their choice for the correct answer.

Choice 1 Percent: Is the percent of students in the reported group who selected choice number 1 as their choice for the correct answer.

This is repeated for choices 2, 3 and 4. Also included is information for students who did not answer the question (No Response) or who recorded multiple responses for the correct answer (Multiple Response). For your convenience, an asterisk (\*) appears to the right of the percent to designate the correct answer.

For the cluster response section:

This portion of the report contains similar information to the multiple choice except that the number and percent associated with each choice is the number and percent of students receiving that score for the question based upon the rubric used. Data is only shown for scores of zero thru the maximum score that can be earned for each question. The column headed "Other" shows students whose answer could not be scored for some reason. (See the Administrator's Manual for more information). Finally, the item difficulty (Item Diff) for the cluster response section is calculated as the sum of the percent earning each score point (1 thru the max) times the point value associated with each percent all divided by the maximum points available for that question. The footer of each page shows the number of students incorporated into the processing for the reports for the NERIC region (Number of cases), all the districts in your BOCES (BOCES), your district (District), and this school (School). The school totals are not printed on the summary for the entire district since it does not apply to that report.

As stated in the 2007-08 Elementary- and Middle-Level ELA Assessments Results Release memo, dated May 6, 2008, "The data are for students whose assessment records were sent from the Level 2 Repository to CTB/McGraw-Hill. School and district aggregated results are embargoed until the Commissioner's press conference, which is scheduled for June 2008. These data cannot be discussed at public meetings or released to the public or the media until after the Commissioner's press conference. Superintendents and principals are encouraged to use the results to make programmatic decisions for individual students. Results for students can be shared with teachers and parents. Individual Student Reports will be produced as they were last year and will be available through nySTART in June."
